PROFESSIONAL SUMMARY

Final-year Computer Science student with 4+ months of hands-on AI/ML internship experience. Specialises in building production-ready agentic LLM systems, retrieval-augmented generation (RAG) pipelines, and end-to-end ML workflows using LangChain, LangGraph, FastAPI, and n8n. Built AI systems spanning NLP, computer vision, healthcare, and fraud detection. Actively seeking entry-level AI Engineer roles to deliver measurable business impact through applied AI.

EDUCATION

B.Tech – Computer Science | ITM (SLS) Baroda University

Sept 2022 – Apr 2026

CGPA: 9.05 / 10 · Vadodara, Gujarat

EXPERIENCE

AI/ML Intern | McKH Technologies

Vadodara · Nov 2024 – Present

- Designed and shipped autonomous AI agents using LangChain + LangGraph, reducing manual task-handling time by an estimated 60% across target workflows.
- Implemented production RAG pipelines (retrieval-augmented generation) integrating vector search (FAISS/Chroma) with LLM inference, improving answer relevance by ~35% over baseline keyword search.
- Automated end-to-end workflows with n8n.
- Collaborated with the product team to define agent evaluation metrics and iteratively tuned prompts, reducing hallucination rate on domain-specific queries.

Machine Learning Intern | CodeSoft

Remote · Jun 2025 – Aug 2025

- Built and deployed NLP pipelines (text classification, sentiment analysis) achieving >88% accuracy on benchmark datasets using fine-tuned transformer models.
- Developed a fraud detection model with an XGBoost + neural ensemble, achieving 94% precision on imbalanced financial transaction data.

Machine Learning Intern | CODECRAFT INFOTECH

Remote · Jun 2025 – Aug 2025

- Designed and trained CNN-based image classification models (ResNet-50, EfficientNet) reaching 91% top-1 accuracy on a custom 10-class dataset.
- Built and benchmarked traditional ML pipelines (SVM, Random Forest) alongside deep learning models, producing a comparative accuracy report that guided architecture selection.

PROJECTS

YouTube RAG Assistant — *Python · LangChain · FastAPI · Chrome Extension*

- Engineered a Chrome Extension that processes YouTube video transcripts in real time and serves context-aware answers through a FastAPI chatbot backend.
- Integrated vector embeddings + semantic similarity search to ground responses in video content, achieving <2 s median response latency.

Healthcare AI Portal — *Python · ML/DL · LangChain · FastAPI · React.js*

- Built multi-disease prediction models (heart disease, diabetes, lung cancer) using fine-tuned ML classifiers, reaching 87–92% accuracy across all three domains.
- Developed an interactive medical chatbot (LangChain + RAG) for personalised risk assessment, reducing time-to-guidance compared to static decision trees.

AdaptiveRAG — *React.js · LangChain · LangGraph · FastAPI*

- Architected a dynamic RAG system that combines knowledge graph retrieval with LLM generation to deliver context-aware answers with source attribution.
- Implemented an adaptive retrieval router using LangGraph state machines, improving answer relevance scores by ~28% on multi-hop queries.

TECHNICAL SKILLS

AI / LLM Frameworks: LangChain, LangGraph, RAG, LLM Agents, Prompt Engineering, FAISS, ChromaDB

Languages: Python, SQL, JavaScript

Backend & APIs: FastAPI, Flask, REST APIs

Frontend: React.js

Databases: MySQL, MongoDB

DevOps & Tools: Git, Docker, n8n

CERTIFICATIONS

- Python – HackerRank
- AI Engineer – OneRoadmap
- Data Analysis & Visualisation – IBM / Google / Microsoft
- LangChain for LLM Application Development – CodeSignal
- AI -- Anthropic
